housing. The engine is part of the BMW modular engine strategy for gasoline and diesel engines, all using same bore spacing, sharing up to 40% of its architecture with the 1.5-litre B37 diesel engine.

BMW B38 1.5-Litre IL3 Gasoline Engine Design Benchmark ...

The B38's 1.2 variant is the smallest BMW car engine since the BMW 700, a car first sold in 1959 and powered by a motorbike engine in the rear. So why is BMW now making three cylinder 1.2 and 1.5 engines? Well one reason is emissions, it's getting tougher and tougher to comply with legislation such as EU6 so efficiency must rise.

In terms of performance, one less cylinder than a standard inline-four engine makes for a decrease in frictional losses from the moving components. This factor along with smaller displacements ...

Here's The Problem With Three-Cylinder Engines

BMW B38. BMW's plan with its three-cylinder engine was always to use it in large as well as small models, and it made its intentions clear in 2013 when it launched the hybrid-assisted i8 sports car. In the i8, the 1,499cc turbocharged unit developed 228bhp, but it's in lower performance packages that it is now most prevalent.
