to 10 percent of pregnancies in the United States. Gestational Diabetes Teaching Guide Start Gestational Diabetes.

## *Gestational Diabetes Teaching Guide Start Your*

Gestational diabetes is a type of diabetes that is first seen in a pregnant woman who did not have diabetes before she was pregnant. Some women have more than one pregnancy affected by gestational diabetes. Gestational diabetes usually shows up in the middle of pregnancy. Doctors most often test for it between 24 and 28 weeks of pregnancy.

## *Gestational Diabetes and Pregnancy | CDC*

Insulin is the most common medicine for treating gestational diabetes. You must give insulin by injection because it does not work when it is taken by mouth. Most women start by giving one to two shots of insulin per day. If your blood sugar levels are high after eating, you may need to give a shot three or four times per day.

## *UpToDate*

At Mayo Clinic, if your blood glucose level is higher than 140 mg/dL (7.8 mmol/L) after the one-hour test, your doctor will recommend the three-hour test. If your blood glucose level is higher than 190 mg/dL (10.6 mmol/L) after the one-hour test, you'll be diagnosed with gestational diabetes. For the three-hour test:
