revision. Four new chapters have been added for this edition. these focus on; \* Non conventional and emerging materials - metallic foams, amorphous metals (including bulk metallic glasses), structural intermetallic compounds and micr/nano-scale materials. \* Techniques for the modelling and simulation of metallic materials. \* Supporting technologies for the processing of metals and alloys. \* An Extensive bibliography of selected sources of further metallurgical information, including books, journals, conference series, professional societies, metallurgical databases and specialist search tools. \* One of the best known and most trusted sources of reference since its first publication more than 50 years ago \* The only single volume containing all the data needed by researchers and professional metallurgists \* Fully updated to the latest revisions of international standards

These volumes cover the properties, processing, and applications of metals and nonmetallic engineering materials. They are designed to provide the authoritative information and data necessary for the appropriate selection of materials to meet critical design and performance criteria.
