In population biology and population ecology, a population size pertains to the number of individual organisms in a population and is denoted by N. A population decline refers to a decline in the population of any organism. Population bottleneck is a reduction in the size of the population for a short period of time.

Population Definition and Examples - Biology Online Dictionary

Populations change over time due to births, deaths, and the dispersal of individuals between separate populations. When resources are plentiful and environmental conditions appropriate, populations can increase rapidly. A population's ability to increase at its maximum rate under optimal conditions is called its biotic potential.
